Global Census Archive GIS Datasets
BURUNDI

Since the beginning of the 2000s, authorities around the world have increasingly made the census output available as geographic information system (GIS) formatted data. The official census outputs are acquired by East View then analyzed and reviewed through an 18-step process to ensure a uniform GIS format, resulting in easy-to-use geodatabases that are easily navigated across all countries, including English translation of all headers.

These East View-created datasets are tailor-made for instant analysis and visualization using any GIS software. All data and files are hosted on the Global Census Archive platform itself. No need to worry about storing data within your organization – users have easy access to GIS data and can download individual components of the dataset with the click of a button.

GIS datasets may be purchased as individual census years or as multi-year packages, depending on availability. Contact your East View representative for pricing information.
