Topographic

Modern topographic mapping of North Korea was established after the end of the Korean War and following partition of the peninsula. A new national triangulation was carried out between 1958 and 1965 and the Gauss Conformal transverse cylindrical projection, Krassovsky ellipsoid, was adopted by the **National Bureau of Geodesy and Cartography**, which assumed responsibility for official map publication. Mapping was carried out with Russian aid by **Glavnoe Upravlenie Geodezii Kartografii (GUGK)**, now **Federal'naya Sluzhba Geodezii i Kartografii Rossii (Roskartografija)**, and specifications followed Soviet practice, but with Cyrillic names replaced by Korean characters. Basic scale mapping at 1:25,000 was carried out and completed for all of the country with a 10 m contour interval relative to the Wonsu Gulf datum. This map was compiled using photogrammetry, apart from a few areas close to the border with the south. Smaller scale series were derived from this survey and published at 1:50,000, 1:100,000, 1:200,000, 1:500,000 and 1:1,000,000 scales. A revision program was implemented using aerial photography and satellite imagery.

Soviet military topographic mapping of North Korea is available at the following scales: 1:1,000,000 (4 sheets, complete coverage, published 1976-1987); 1:500,000 (11 sheets, complete coverage, published 1982-1991); 1:200,000 (41 sheets, complete coverage, published 1977-1992); 1:100,000 (122 sheets, complete coverage, published 1978-1992); 1:50,000 (405 sheets, complete coverage, published 1978-1991) and city (1:10,000 to 1:25,000) topographic mapping of Chongjin, Dandong, Hamhung, Kaesong and Pyongyang published between 1975 and 1981. These products are available in print, digital raster and digital vector GIS formats from **East View Geospatial**.

Nautical

Hydrographic charting of North Korean coastal waters has been carried out by the **Hydrographic Department** in Pyongyang. A range of 200 charts for domestic use are maintained, with 15 charts for foreign vessels. The best available charting of these waters is Russian

coverage compiled by the Soviet **Chief Administration for Navigation and Oceanography, Glavnoe Upravlenie Navigatsii i Okeanografii (GUNO)**, which is available in print, digital raster and digital vector GIS formats through **East View Geospatial**.

[Back to top](#)

Geological/Scientific

Small scale mapping of the whole Korean Peninsula is the best available earth science coverage of North Korea. This includes a geological map from the Russian **Ministry of Geology (Roskomnedra)** and South Korean coverage from the earth science mapping agency **Korea Institute of Geology Mining and Materials (KIGAM)** in Seoul. Larger scale earth science mapping programs in the past have been sponsored by the **Geology and Geography Research Institute** of the **North Korean Academy of Sciences** in Pyongyang.

[Back to top](#)

Atlas

In 1997 a two-volume atlas of North Korea was published by the South Korean **Kyung-In Publishing Company** which included complete 1:50,000 scale North Korean coverage.

[Back to top](#)

Tourist/Reference

North Korea is covered on commercially published general maps of the whole Peninsula from **Chungang** and **Nelles Verlag**.
