Topographic

The **National Survey Authority (NSA)** of the Sultanate of Oman was established in 1985 as a unit within the Oman **Ministry of Defence** and is responsible for military and civilian surveying and mapping of the state. The Sultanate is covered in 137 1:100,000 scale maps on the Transverse Mercator projection, International ellipsoid, published in (Series K6611). This British military series was started by the **Directorate of Military Survey (DMS)**, as a joint English and Arabic script version. **NSA** now maintains and updates the mapping. Limited field revision and general update of the series is being carried out and a program was completed in 1996 involving the conversion of place names into Arabic versions. A program of 1:50,000 scale mapping has been started, based upon new 1:60,000 scale aerial coverage, to support military and geological exploration requirements. A long term large scale digital mapping program for civilian ministries is in progress and includes 1:2,000, 1:5,000 and 1:10,000 scale map compilation and generation of AUTOCAD data. Urban areas and areas with development potential are being mapped, and ARC/INFO coverages of 1:20,000 scale mapping are being produced as part of the new National Geographic Database.

1:20,000 scale maps of Muscat and Salalah are available and **NSA** publishes a regularly revised tourist map at 1:300,000 scale, available in English or Arabic versions.

Soviet military topographic mapping remains the best available for the Sultanate of Oman, existing at the following scales: 1:1,000,000 (5 sheets, complete coverage, published 1957-1982); 1:500,000 (12 sheets, complete coverage, published 1977-1982); 1:200,000 (64 sheets, complete coverage, published 1975-1981) and 1:100,000 (130 sheets, primarily eastern country coverage, published 1978-1979). These products are available in print, digital raster and digital vector GIS formats from **East View Geospatial**.

Nautical

Hydrographic charting of Oman is carried out by the **Oman National Hydrographic Office**, established in 1992. A digital chart production system has been in operation since 1995 and a series of 50 paper charts and accompanying products is in progress.

[Back to top](#)

Geological/Scientific

Earth science mapping of Oman is the responsibility of the **Ministry of Petroleum and Minerals (MPM)**. Modern geological series mapping of the country was established by the French **Bureau de Recherches Géologiques et Minières (BRGM)** between 1985 and 1994. A 1:250,000 scale series covers the whole country in 28 sheets, available with separate explanations. 1:100,000 scale mapping covers parts of Northern and Southern Oman and a 1:50,000 scale series is published for limited northern high priority areas. A number of smaller-scale themes are also available.

[Back to top](#)

Soil

The **Ministry of Agriculture and Fisheries** has compiled a general soil map of Oman, which covers the whole country on 1:100,000 scale topographic bases. This project was completed in 1990 and sponsored by the **United National Development Program** and the **Food and Agriculture Organization** of the United Nations. More detailed case study surveys have been carried out for some areas.

[Back to top](#)

Cadaster

In 1993 the **Supreme Committee for Town Planning** assumed responsibility for civilian mapping of the country, including the compilation of urban digital coverages. Cadastral surveying and mapping is carried out by the **Ministry of Housing**.

[Back to top](#)

Tourist/Reference

Commercial coverage of Oman is available in the *Arab World map library* series from **GEOprojects**, and in the *Hildebrands Urlaubskarte* series from **Karto + Grafik**.
