Topographic

The official mapping agency for Paraguay is the **Dirección del Servicio Geográfico Militar (DSGM)** (formerly **Instituto Geográfico Militar**), Asunción, founded in 1941. **DSGM** is responsible for the surveying and mapping of Paraguay and for geographical information. It supervises both topographic and thematic maps of the country.

Detailed topographic mapping is of comparatively recent origin. A 1:100,000 scale photomap series of the south of the country was prepared by the United States **Army Map Service** in the 1960s, but the principal current Series H741 is at 1:50,000 scale, and was begun in association with the **IAGS**. This now covers more than 80 percent of the country. Sheets are in five colors with 10 m interval contours, and the projection is Transverse Mercator, International spheroid. There is also a cover of the southern two-thirds of the country in the 1:250,000 Series H501/H541. This series is on UTM projection, International spheroid, and is also in five colors, but with contour interval varying from 10 m to 50 m according to relief. The earliest sheets date from 1978, but some were issued under the **PAIGH** program in the early 1990s.

There is also a series of topographic maps designed to cover each of the 19 departments, and produced with assistance from Argentina. Ten or more of these have so far been published; they vary in scale and contour interval.

DSGM also publishes some small-scale general maps of the country, which are frequently revised, including a tourist map of Asunción at 1:25,000 scale and a 1:10,000 map of the greater Asunción area in 13 sheets.

A series of maps of other cities, *Mapa de ciudades Paraguay*, has been in progress since about 1966 (Series H941). The scale is mostly 1:10,000 with contours at 10 m intervals. The projection is Transverse Mercator, International spheroid.

Soviet military topographic mapping of Paraguay is available at the following scales: 1:1,000,000 (6 sheets, complete coverage, published 1978-1990) and a city (1:10,000) topographic map of Asunción published in 1981. These products are available in print, digital raster and digital vector GIS formats from **East View Geospatial**.

Thematic

There is a dearth of large-scale thematic mapping of Paraguay. A 1:50,000 scale geological program was started in the early 1960s, but was soon discontinued. There are, however, a number of small-scale earth science maps, including geological and hydrogeological maps published in 1986, and a metallogenic minerals map reprinted in 1990.

In 1975, several 1:500,000 scale resource maps were published covering the *Region nororiental del Paraguay*. The survey was sponsored by the Organization of American States, and the map themes included geology, soils, vegetation, soil capability and population. A new set

of thematic maps on soil, land use and land development was published in 1995 also at 1:500,000 scale but covering the Region oriental. They are in colour and are a result of the *Proyecto de Racionalizacion del Uso de la Tierra*, funded by the World Bank, Japan and the American **Defense Mapping Agency** (now **National Imagery and Mapping Agency (NIMA)**), as well as the Paraguay government. They are on a Transverse Mercator projection, WGS84 datum. They are published by the **Ministerio de Agricultura y Ganadería (MAG)**.

Cadaster

Cadastral mapping is the responsibility of the **Servicio Nacional de Catastro**, while large scale cadastral mapping of Asunción is issued by the **Oficina de Desarrollo Urbana (ODU)**, Asunción. Larger scale planimetric maps of the city were produced with Japanese and Brazilian aid in the 1980s.
