Country Profile (PDF)

Topographic

The first accurate mapping of the mainland of Tanzania and offshore islands Pemba and Zanzibar was carried out when the state was administered as a trust territory by Great Britain. The **Directorate of Colonial Surveys** (later **Directorate of Overseas Surveys (DOS)** and now **Ordnance Survey International (OSI)**) started a photogrammetric 1:50,000 scale series in 1947, which like other British African mapping was based upon the Transverse Mercator projection, Clarke 1880 ellipsoid, and quarter-degree quadrangles. Early editions were planimetric. **DOS** established full-color topographic mapping on the same sheet lines, with 50 ft contours. The national mapping agency in Tanzania, the **Surveys and Mapping Division (SMD)** founded after independence in 1964, has continued to maintain and revise this series as the basic scale for most of the country. The current specification shows relief with a 20 m contour interval and is available for the whole country in 1,250 sheets. **SMD** has received technical aid from Japan, Poland, France, Britain, Italy and Canada to enable completion and updating of this map, which is used to derive smaller-scales.

A 1:250,000 scale map covers the country in 49 sheets, conforming to **DOS** East African specifications in Series Y503. Since 1970 these have been compiled from 1:50,000 scale data to show relief with metric layer tinting, but earlier editions used imperial contours. Smaller-scale maps include six sheets of the *International map of the World*, dating from the 1960s. A single map on these sheet lines was produced by **DOS** in the mid-1980s as an experimental LANDSAT-based image map. 1:2,000,000 scale coverage from **SMD** is regularly revised and a series of district maps is also published, with the scale varying according to the size of the administrative unit. About 60

settlements in Tanzania are mapped at 1:2,500 scale, and 1:5,000 scale coverage is derived from this source for some areas. A full-color 1:20,000 scale map of Dar-es-Salaam was published with Norwegian aid in 1995. This is derived from 1992 aerial photographs, also includes 1:10,000 scale mapping of the city centre, and shows relief with 10 m contours.

The island of Zanzibar has its own survey authority, the **Department of Surveys and Urban Planning** in the Ministry of Water Construction Energy Lands and Environment, and Zanzibar and Pemba are mapped in greater detail than most of the mainland. A seven-color 1:10,000 scale series was compiled by **DOS** to cover Zanzibar in 58 sheets and issued between 1982 and 1986. This is on the UTM projection and shows relief with 5 m contours. Pemba was covered to similar specifications in 44 sheets from 1985 to 1987. 1:50,000 scale maps were derived from this source material. **DOS** urban mapping of towns on the islands was also revised in the 1980s.

Soviet military topographic mapping of Tanzania is available at the following scales: 1:1,000,000 (7 sheets, complete coverage, published 1958-1977); 1:500,000 (22 sheets, complete coverage, published 1962-1985); 1:200,000 (46 sheets, primarily southern country coverage, published 1983-1984) and a city (1:10,000) topographic map of Dar es Salaam published in 1980. These products are available in print, digital raster and digital vector formats from **East View Geospatial**.

Nautical

Hydrographic charting of Tanzanian waters is carried out by the British **Hydrographic Office (HO)**.

[Back to top](#)

Geological/Scientific

Earth science maps of Tanzania have been produced by the **Ministry of Energy and Minerals (MEM)**. A 1:125,000 scale series on quarter-degree sheet lines is available for about half the country, with full colour depiction of litho-stratigraphy. Some of the maps in this series were compiled with German aid. A 1:500,000 scale coverage of the Lake Victoria goldfields was compiled in 1990. Other smaller-scale mapping includes maps produced to accompany a five-volume summary of the geology of the country, including 1:2,000,000 scale mineral and structural maps, as well as larger scale more local coverage.

[Back to top](#)

Soil

A limited amount of resources mapping of Tanzania has been published, notably by the British **Natural Resources Institute (NRI)** and its predecessors, and the Dutch **ITC**. A soil atlas of the country was compiled in the early 1980s giving very small-scale thematic coverage.

[Back to top](#)

Tourist/Reference

Small-scale tourist maps of Tanzania are published by **Freytag-Berndt**, **Macmillan**, **Nelles Verlag** and **New Holland**. Double-sided maps of national parks in Tanzania are compiled by **Giovano Tombazzi**, and **OSI**, **ITM** and **West Col** produce larger scale special sheets to cover Mount Kilimanjaro. An image map of the mountain has been compiled by **Nigel Press** and published with **Stanfords**, London.

[Back to top](#)

Census/Demography/Statistics

The **Central Bureau of Statistics** in Dar es Salaam assists **SMD** to map the results of censuses, as well as carrying out pre-census mapping showing census divisions in districts and regions.
