

East View presents the **Global Census Archive® (GCA)**, an innovative program to collect official data and publications issued by national census authorities from around the world.

### SPOTLIGHT ON GIS CENSUS DATA

Since the beginning of the 2000s, authorities around the world have increasingly made the census output available as geographic information system (GIS) formatted data. East View acquires the official data outputs and employs a workflow to ensure a uniform GIS format for these materials that can be used by several GIS platforms.

GCA-GIS census products include a geodatabase with administrative boundary vector data, shapefiles, census guide, original census documentation, and full attribute level metadata.

### Featured GIS Census data

**Note:** GCA is continually growing, with new countries and census years constantly being sourced. If there is a country you are interested in that does not appear on this list, please contact us to discuss availability and status.
