

EAST VIEW GEOSPATIAL Imagery & Remote Sensing

Your Centralized Source for Satellite Sensors

East View Geospatial is an established authorized reseller for multiple commercial satellite and aerial imagery companies. With access to dozens of different operating sensors, we'll find the perfect image for your needs.

We regularly task the collection of new imagery from our network of sensors, providing the latest snapshot over your area of interest. If you're looking to the past, our partners' archives contain thousands of images over several decades.

In addition to satellite imagery, we collect and process Synthetic-Aperture Radar (SAR) and Light Detection and Ranging (LiDAR) data. Whether detecting objects not captured by optical sensors or making detailed terrain models, we're downloading and delivering products with the latest remote sensing data.

Imagery Partners

We are an established reseller for leading imagery providers, including:

- | | |
|-----------------|------------------------|
| 21AT Asia | ImageSat International |
| ALOS | Maxar Technologies |
| BlackSky | Planet |
| Capella Space | PlanetObserver |
| Hexagon Imagery | SATREC |

Imagery Services

We offer a comprehensive range of imagery services tailored to meet the diverse needs of our clients, including:

Imagery Acquisition: We facilitate the acquisition of a wide variety of satellite and aerial imagery from a global network of data providers. We work closely with clients to understand their specific requirements and procure the most suitable imagery to meet their needs, whether it's high-resolution satellite imagery, aerial photography, or specialized data collections.

Image Processing and Analysis: We provide image processing and analysis services to unlock the full potential of geospatial data. We offer advanced techniques and software tools to enhance, manipulate, and analyze imagery, enabling clients to extract valuable insights and derive actionable information from the data.

Custom Product Development: We excel in creating custom geospatial products tailored to specific customer requirements. We combine our expertise in geospatial technologies with client input to develop bespoke solutions, such as orthorectified mosaics, digital elevation models (DEMs), 3D visualizations, and thematic maps, ensuring that the products align with the specific needs and objectives of the project.

Archive and Historical Imagery: With our extensive data archives, we offer access to historical imagery collections, enabling clients to analyze past conditions, changes over time, and trends. This is particularly valuable for applications such as environmental monitoring, urban development studies, and historical research.

GeoWeb Solutions: We provide web-based solutions to visualize, analyze, and share geospatial data. We offer customizable web mapping applications and platforms that enable clients to efficiently access and utilize imagery, perform spatial analysis, and collaborate on projects, fostering better decision-making and information sharing.
